

In September 2015, a new take-up system will be implemented on all of our **56100 Series**. This new design was implemented to eliminate the thread wrap-ups that can occur with a rotary take-up.

Old Take-Up

New Take Up

The new style will have a **'T'** added to the existing styles. For example, 56100MB becomes 56100MB**T**, 56100MZ34B becomes 56100MZ34B**T**, etc..

This is the 3<sup>rd</sup> design improvement that has been implemented on all 56100 series machines in past few years. These changes set us apart from competition and why the 56100 series should be the #1 choice for your customers making bags.

Summary of the improvements:

- 1) Front bushing replaced by bearing ('B' was added to styles)
- 2) New oil return pump to help with lubrication of machine
- 3) New take-up ('T' is added to the styles)

**Please inform your customers about the new design improvement.**
